Full marks may be obtained by doing three-fourths of this paper. 1. If the parallelogram of forces be true for the direction of the resultant of any force and each of two other forces taken separately, then it will be true for the direction of the resultant of that force and the two other forces taken together. 2. Deduce the triangle of forces and the polygon of forces from the parallelogram of forces. If the resultant R of the two forces P and Q inclined to each other at any given angle make the angle ϕ with P, prove that the resultant of the a forces (P+R) and Q at the same angle will make the angle-with P+R. 3. If any number of forces in one plane act upon a rigid body, prove that they may be always replaced by a single force acting at any point and a couple. 4. Find the centre of gravity of a pyramid. If ABCD be a tetrahedron, and if the plane CDE passing through the edge CD cuts AB in E, prove that the line joining the centres of gravity of the tetrahedrons ABCD and AECD is parallel to AB. 5. Find the conditions of equilibrium when any number of forces in one plane act on a rigid body. Four heavy rods, equal in...
