

IUTAM Symposium on Developments in Geophysical Turbulence

By Kerr, Robert M. / Kimura, Yoshifumi

Book Condition: New. Publisher/Verlag: Springer Netherlands | Held at the National Center for Atmospheric Research, Boulder, CO, June 16-19, 1998 | This symposium continues a long tradition for IUGGJ/IUTAM symposia going back to "Fundamental Problems in Turbulence and their Relation to Geophysics" Marseille, 1961. The five topics that were emphasized were: turbulence modeling, statistics of small scales and coherent structures, convective turbulence, stratified turbulence, and historical developments. The objective was to consider the ubiquitous nature of turbulence in a variety of geophysical problems and related flows. Some history of the contributions of NCAR and its alumni were discussed, including those of Jackson R Herring, who has been a central figure at NCAR since 1972. To the original topics we added rotation, which appeared in many places. This includes rotating stratified turbulence, rotating convective turbulence, horizontal rotation that appears in flows over terrain and the role of small scale vorticity in many flows. These complicated flows have recently begun to be simulated by several groups from around the world and this meeting provided them with an excellent forum for exchanging results, plus interactions with those doing more fundamental work on rotating stratified and convective flows. New work on...

Reviews

This book may be worth buying. I have read and I am confident that I am going to plan to go through once more once again in the future. It has been written in an exceptionally easy way and it is simply soon after I finished reading this publication in which it actually altered me, modified the way I believe.

-- Faye Shanahan

Completely one of the best publications I actually have ever studied. I really could comprehend almost everything out of this written publication. Your daily life span will likely be changed as soon as you total reading this publication.

-- Prof. Adolph Wisoky
