

New Advances in Distributed Computer Systems

Filesize: 2.77 MB

Reviews

*Extremely helpful for all class of folks. It is really simplified but excitement from the 50 percent of your ebook. You wont sense monotony at any moment of your time (that's what catalogs are for about if you check with me).

Book Condition: New. Publisher/Verlag: Springer Netherlands | Proceedings of the NATO Advanced Study Institute held at Bonas, France, June 15-26, 1981 | Proceedings of the NATO Advanced Study Institute, Bonas, France, June 15-26, 1981 | This volume contains the papers presented at the NATO Advanced Study Institute of New Advances in Distributed Computer Systems held between 15th and 26th June, 1981 at the Chateau de Bonas, France. The aim of the meeting was to promote an interchange of ideas between experts in the interlinked fields of communications and computers in order to determine the essential areas for future development. Its programme was arranged to explore a number of current topics including the public data-communication networks set up by the PTTs or corresponding bodies in various countries, large-scale non-public systems such as ARPANET and its latest developments, international systems such as the airlines&SITA network, the recent and very important developments in local area networks and relevant developments by universities and other higher educational bodies. The recent moves towards formalisation and the laying down of a theoretical basis to guide future developments and standards were discussed with particular reference to the International Standards Organisation "7-layer model for Open System Interconnection" and the development of formal mathematical methods for specifying and analysing communication systems and their protocols. Consideration was also given to the theoretical techniques, and their practical realisation, now becoming available to ensure privacy and security of information transmitted over digital communication systems. Finally the penetration of the concepts of distributed processing into the domain of computer architecture, giving such possibilities as array processors and other non-von Neumann architectures formed the subject of several of the sessions. | 1. Network Development.- Introductory Survey.- Data Communication in Israel - Present and Future.- Datanet 1 of the Netherlands&PTT.- of Radio-based Air/Ground...
